

Let me think on *that*.

The Navigator is thinking. A copper polyline sketches itself across the paper map; the phase indicator walks five steps; the rider's prompt sits locked with a spinner where the send button used to be. 7 variants: 4 primary phases (S01–S04) + 3 edge states.

The moment after *send*

A small sketch stub has appeared near the start pin. Step 1 ring pulses; steps 2–5 wait. Chat input is non-interactive — spinner in trailing slot, prompt visible.

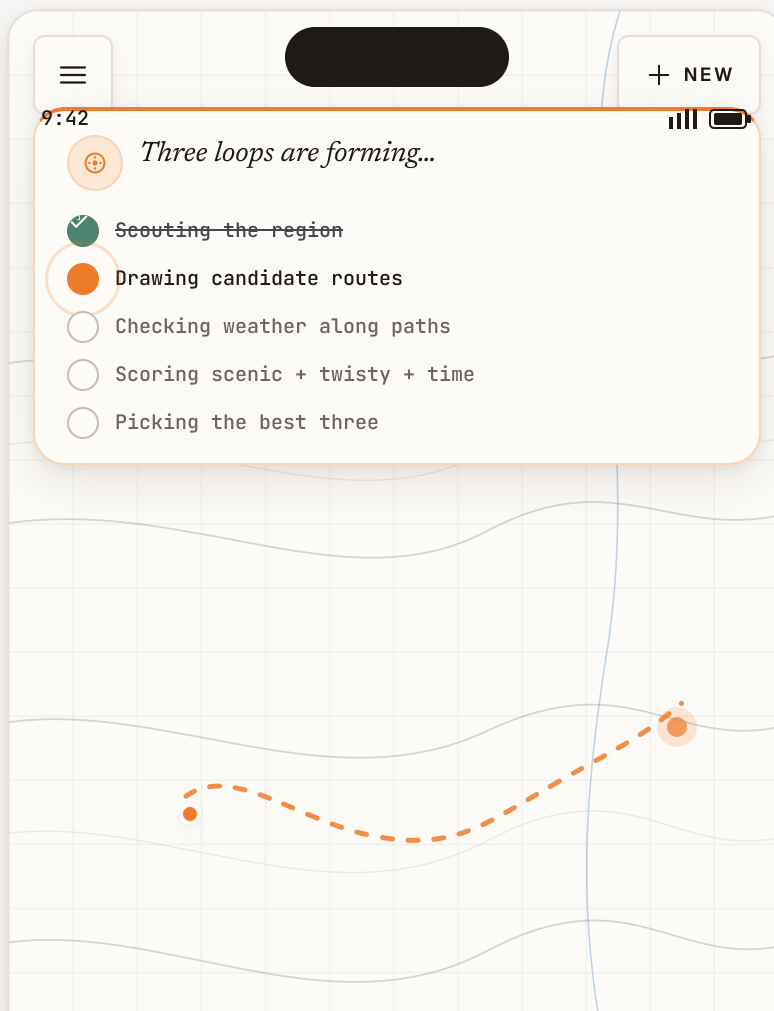

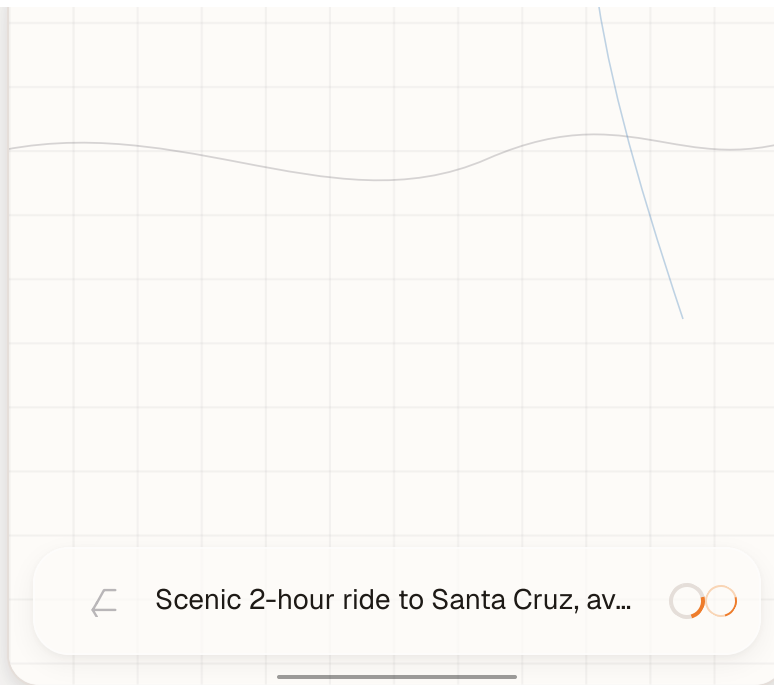

— S02 • Phase 2 • Drawing Routes • Light

Three loops are *forming*

Sketch extends further across the paper. Step 1 marked done (check); step 2 pulses. Phase title shifts to context-aware copy.

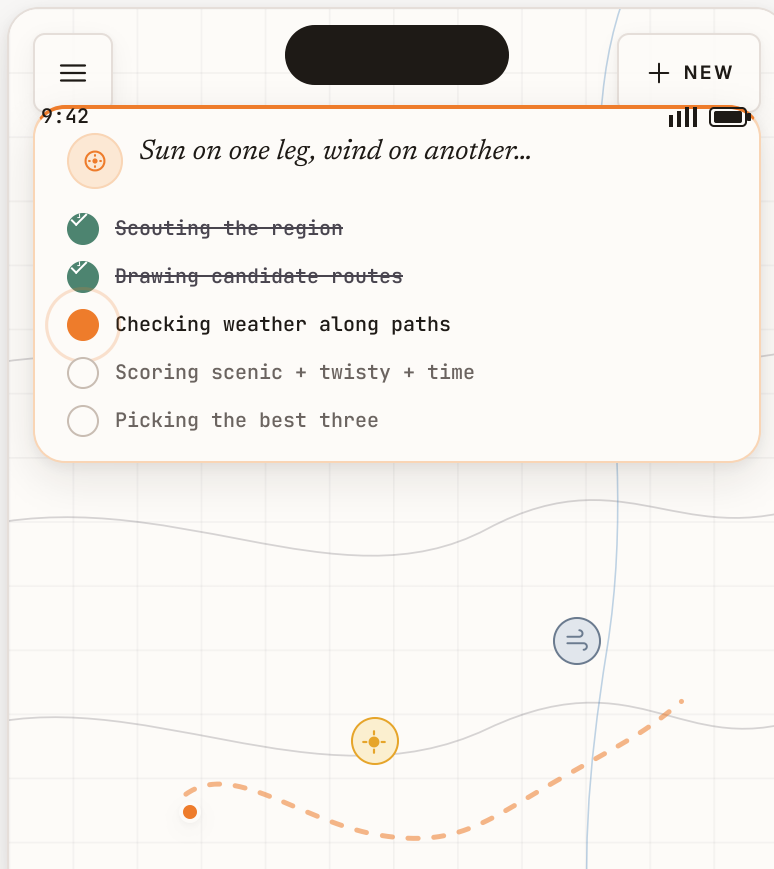

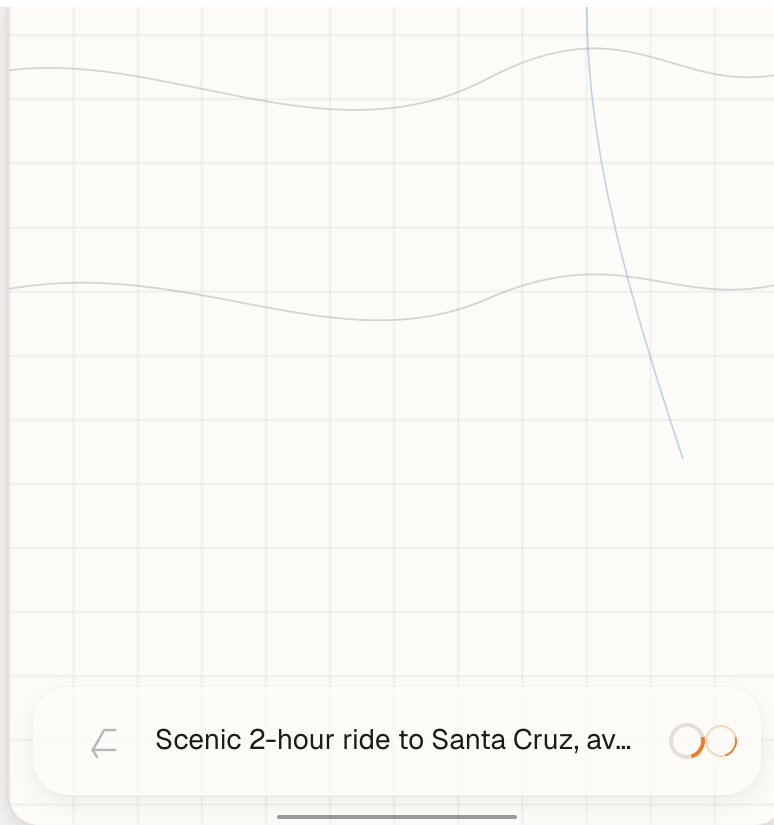

— S03 • Phase 3 • Weather • Light

Sun on one leg, *wind on another*

Phases 1–2 done; phase 3 active. Weather condition icons float over the dimmed sketch. Clear and wind dots float on the route to show per-leg weather checks.

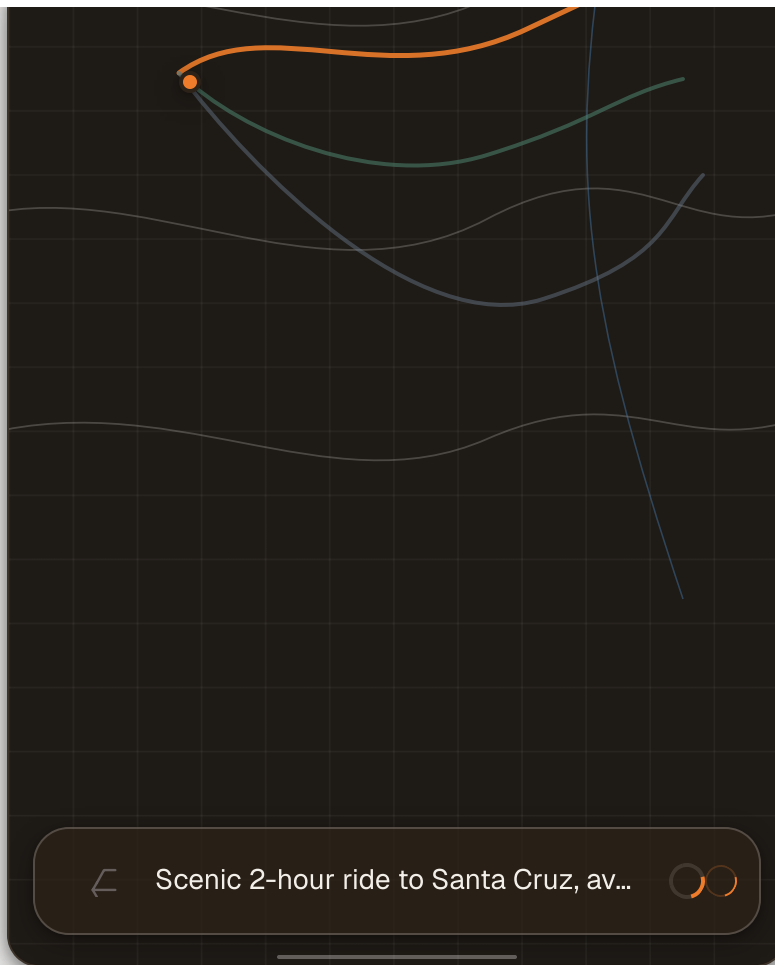

S04 • Phase 4 • Scoring • Dark

Ranking by scenic + *twist*

Dark mode. Three candidate polylines visible: best (copper, 90%), alt1 (sage, 55%), alt2 (slate, 45%). Phases 1–3 done; phase 4 active. All tokens re-resolve on warm-dark ink.

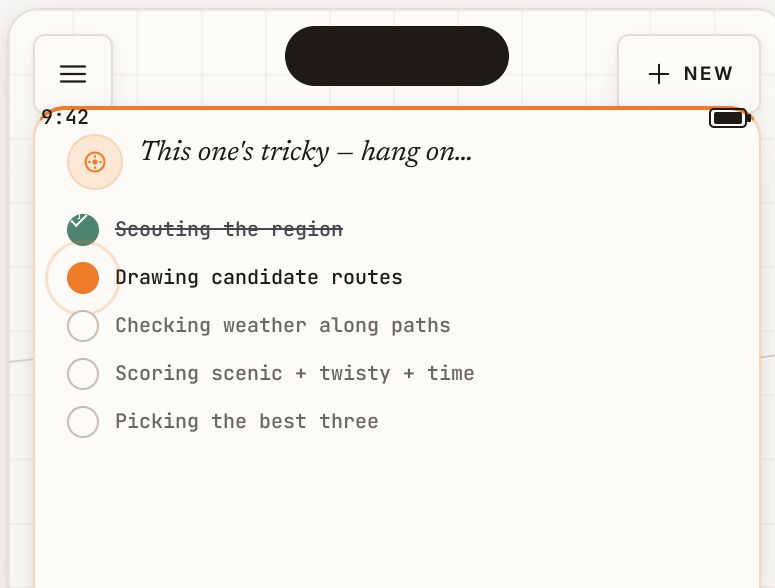

— V01 • Slow Planning • >4s

This one's *tricky* – hang on

Phase-stays-active timer crosses 4s. An inline explanation appears below the steps — not an error, just the Navigator being honest about complex geography.

Complex geography – every candidate keeps touching the highway you asked me to avoid.

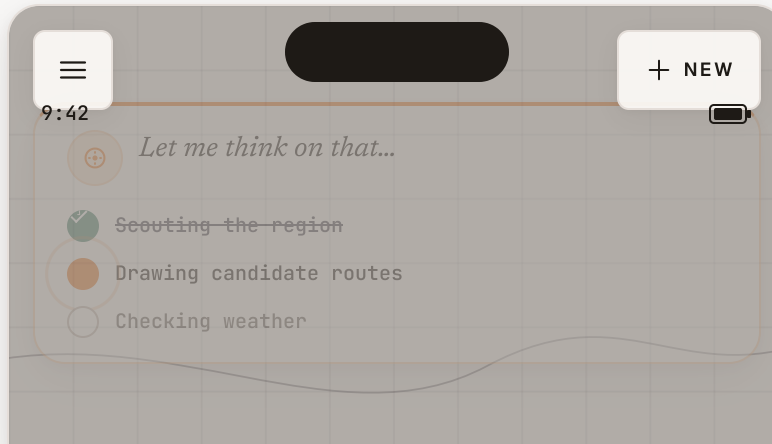

Scenic 2-hour ride, avoid Hwy 1 & H...

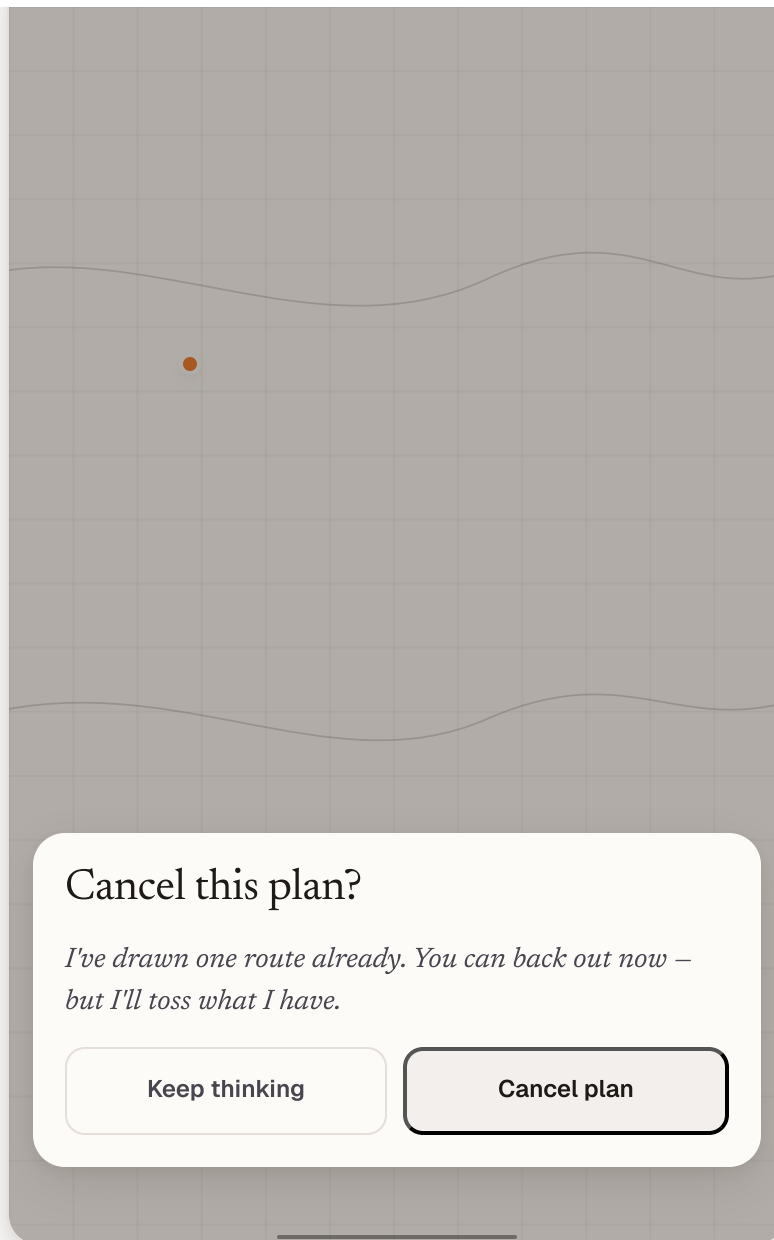

— V02 • Cancel Prompt

Cancel this *plan*?

System-back gesture during planning triggers a confirm sheet. Phase card dims to 38% opacity. "Keep thinking" resumes the stack; "Cancel plan" drops to Idle.

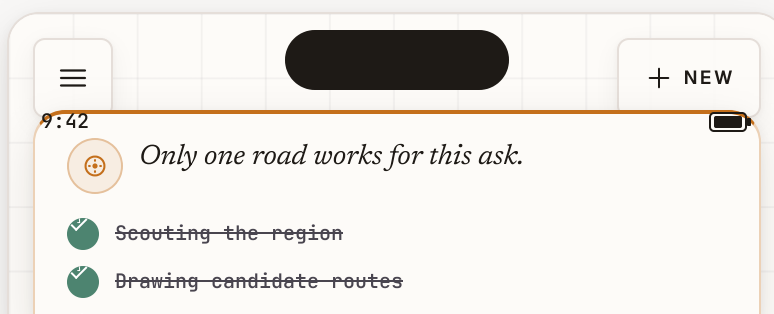

— V03 • Single Candidate

Only one road works for *this ask*

Constraints leave fewer than 3 candidates. Phase card shifts accent to warning-copper; a tinted advisory block surfaces below the steps. Transitions to RouteResults with fewer than 3 attachments.

- ✓ ~~Checking weather along paths~~
- ✓ ~~Scoring scenic + twisty + time~~
- Only 1 candidate – narrowing...

The constraints leave only one viable loop. I'll show you what I found – feel free to relax an ask.

Under 20 min, twisty, avoid all highw...
