

Three *answers*, drawn on paper.

The Navigator has finished. Three polylines – best, alt1, alt2 – fan across the map and a signal-accented message carries the reasoning plus a stack of compact route cards. 7 variants: 4 primary (default · alt-selected · refining · dark) + 3 edge states.

Copper polyline leads, *three cards stacked*

Three polylines fan from start to end — best route in copper, alt1 dashed sage, alt2 dashed slate. NavigatorMessage pinned with compass chip, opinion prose, three compact route cards; first card selected with copper stripe and Best badge.

— S02 • Alt1 Tapped • Sage Promoted • Light

Sage polyline *promoted*, copper dims

Tapping the Sun-Side Loop card shifts selection. Alt1 polyline goes solid-bold; the copper best-route dims to a dashed ghost. Navigator compass chip and label re-tint to sage. Best badge stays on its original card.

S03 • Default • Dark

Night ride on *ink paper*

Same composition on the dark Copper map style. Best polyline gains an outer copper glow so it reads against ink. Glass surfaces, route cards, and weather badges all re-resolve on dark tokens.

— S04 • Refining • Light

Chat active, routes *dim*

Rider typed into the input. Map dims with a warm scrim, routes fade to 40%, Navigator message auto-dismisses (unpinned). Three refine primers appear above the input as quick completions; send button is live.

— V01 • Two Candidates • Constraint Narrowed

Constraint *removed* one option

Only two viable candidates; only two polylines on the map. Navigator is transparent about the missing third. Chat input placeholder invites relaxing the constraint.

— V02 • Weather Divergent • One Route Gets Wet

Weather badges *surface divergence*

Rain moving inland — two routes stay clear, alt2 catches rain at 2pm. Per-card weather badges surface divergence. Map includes faint storm hatching on the affected quadrant.

— V03 • Message Dismissed • Routes Remain

Clean map, *routes persist*

Rider tapped close on the Navigator message; three polylines stay drawn. A small "Recall" chip parks where the message was so the reasoning isn't lost. Chat input placeholder primes tap-to-pick behavior.
