

UC-SCR-01 · IDLESCREEN · VIEW

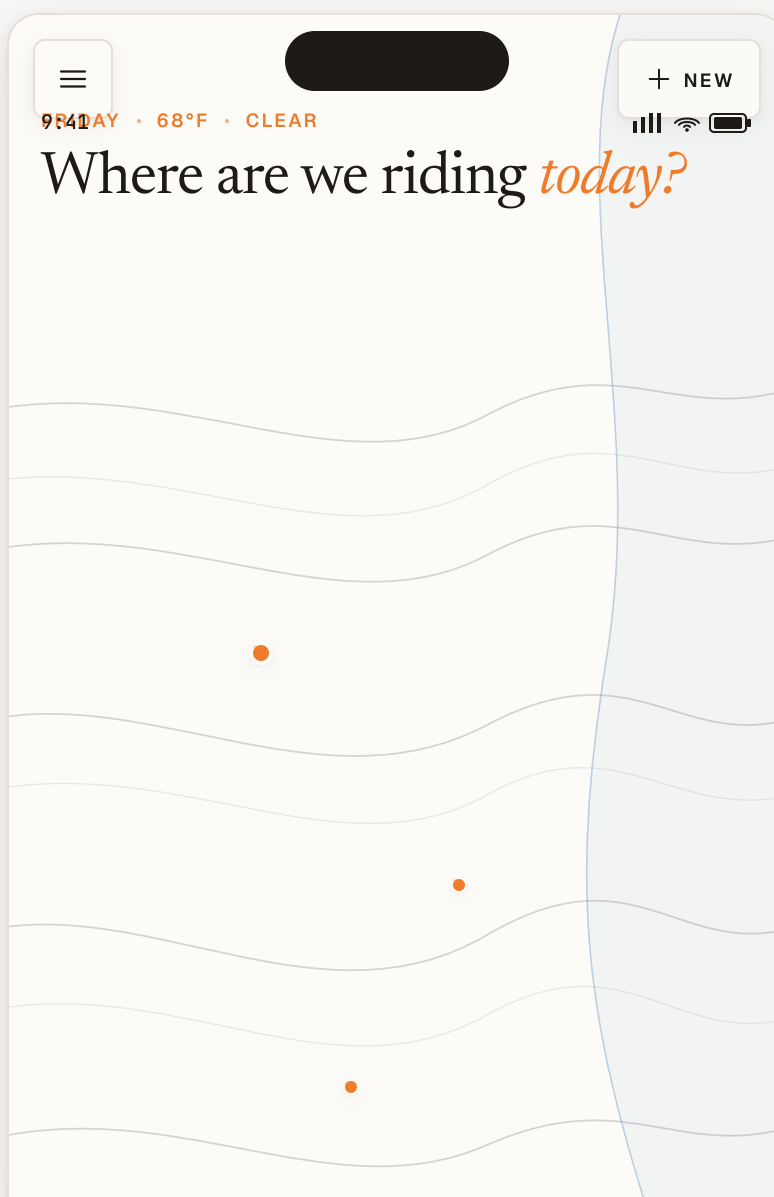

Where are we riding *today*?

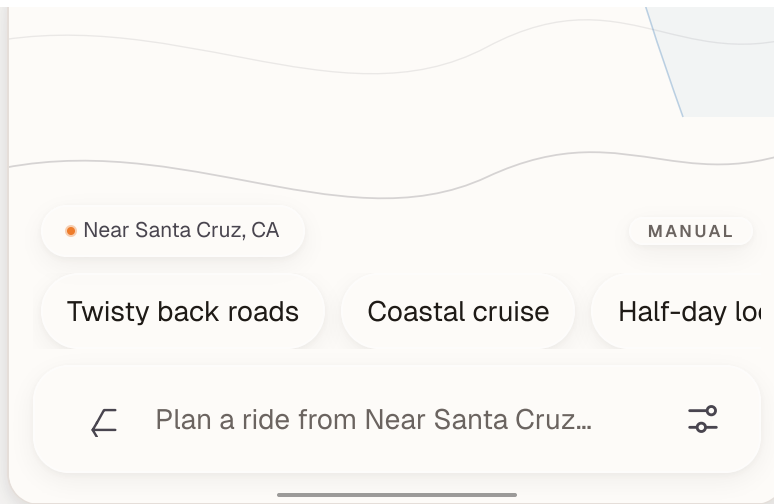

*The dormant-Navigator home. Warm paper canvas, one opinion asked of the rider, four ways to listen.
7 variants: 2 primary (default · typing) × light/dark + 3 edge states.*

S01 · Default · Light

Paper map & the *today* question

The dormant state. Newsreader greeting; four suggestion chips; "MANUAL" tag — location resolved without GPS handshake. Copper pins mark saved favorites.

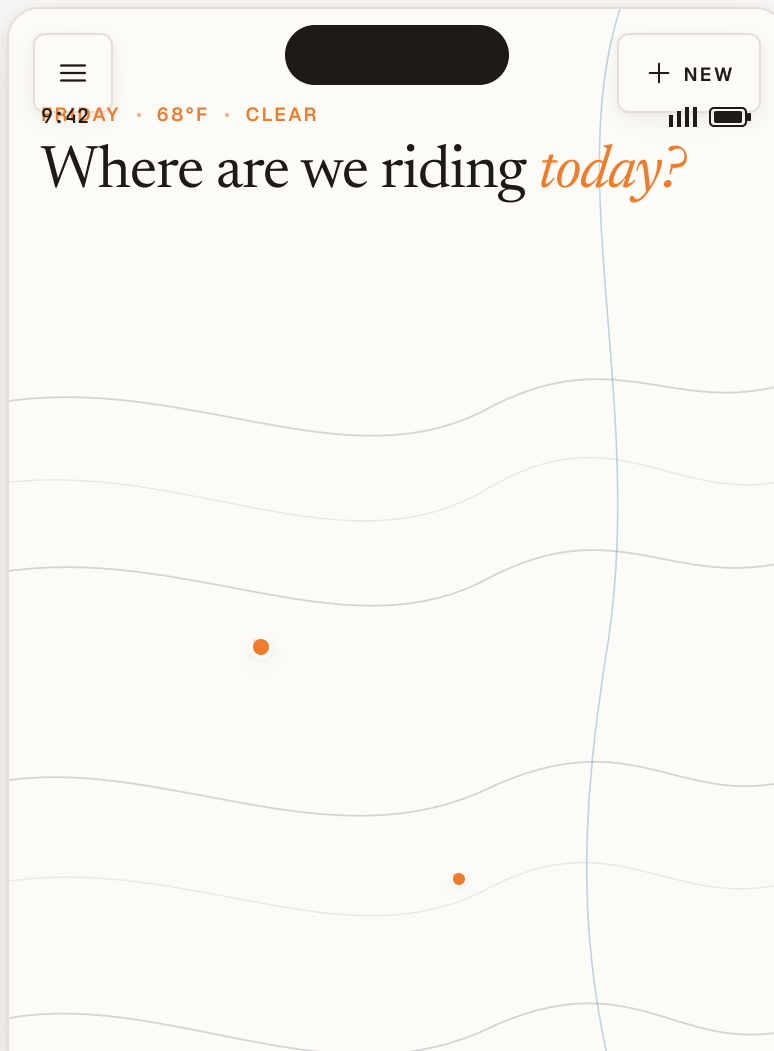

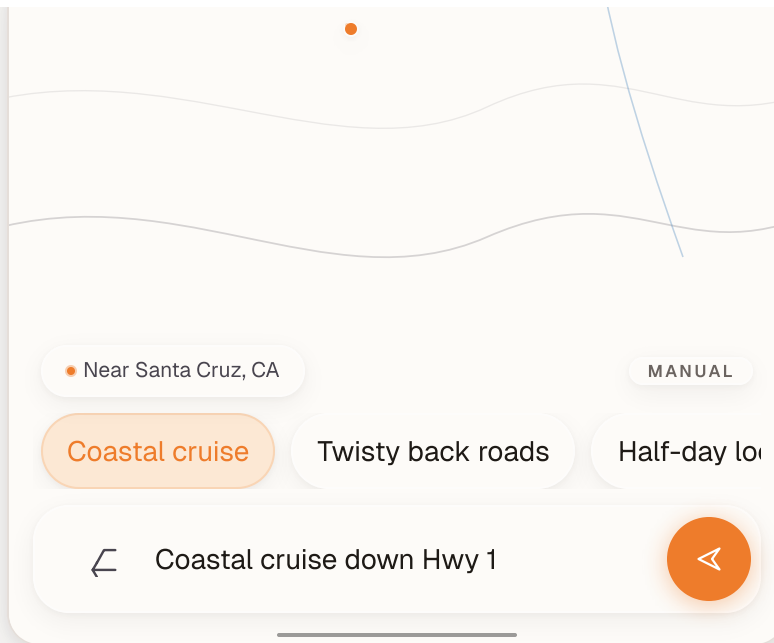

— S02 • Typing • Send

Text entered, send *reveals*

Tapping a suggestion primes it (copper tint) and fills the input. Trailing slot swaps from sliders to copper send; suggestion row compresses to remaining primers.

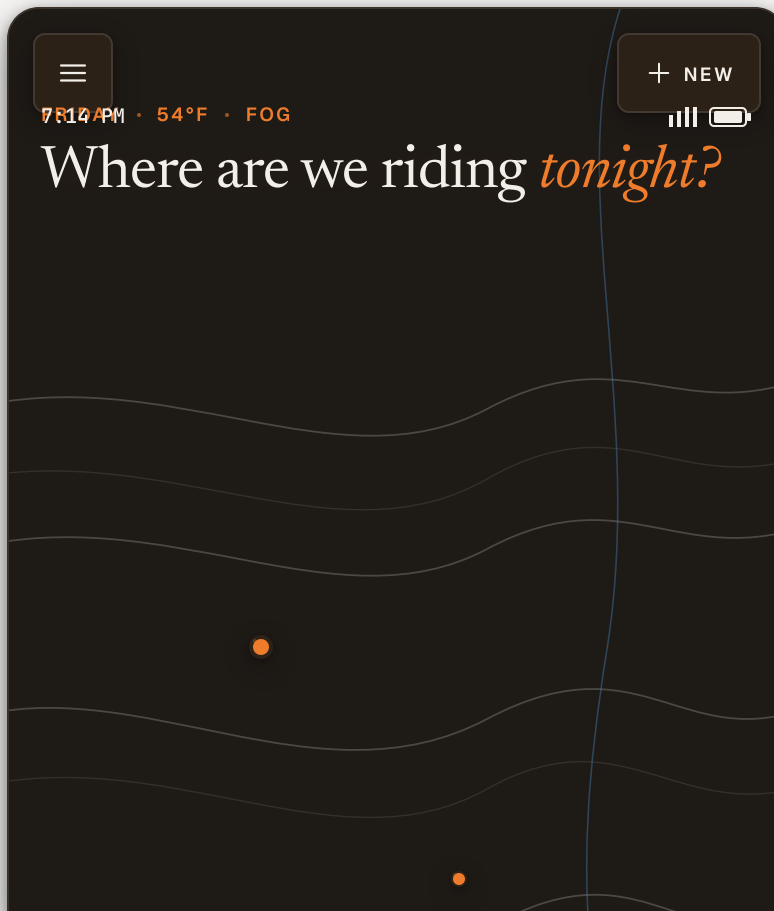

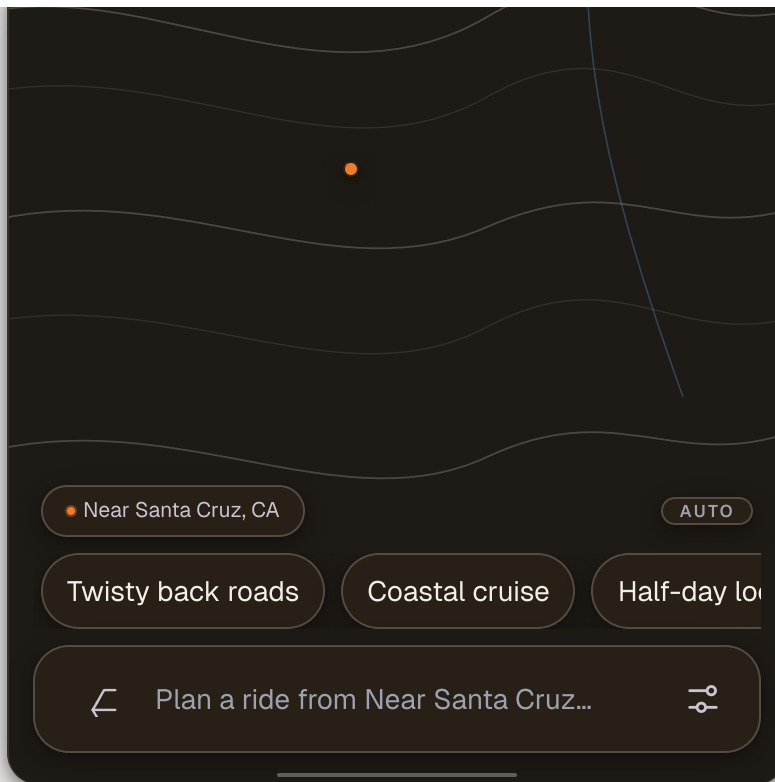

— S03 • Default • Dark

Copper on ink — *night mode*

Every element re-resolves on warm-dark ink. Contours invert to bone; glass chrome drops luminance; copper signal remains identical. Greeting rewrites to "tonight" (Greeting.scope).

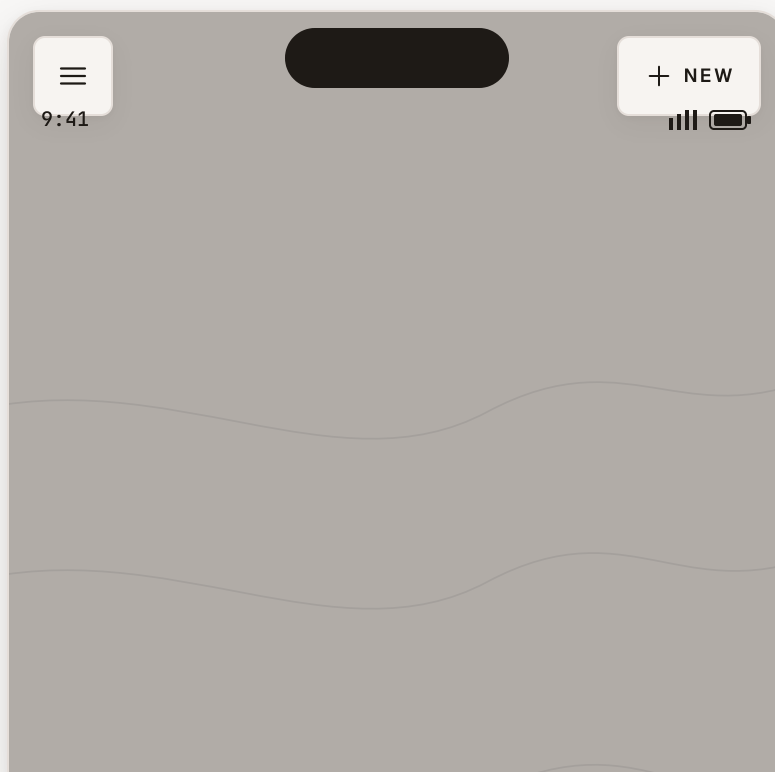

— S04 • Filter Sheet

Refinement surface *presented*

Tapping the sliders icon opens the filter sheet at .medium detent. Chips compose from LSSliderChip (UC-MOL-05). Sheet scrim dims the map; dragging down dismisses without applying.

Refine the ask

What should the Navigator avoid, favor, or time for?

DAY · SET A START

+ NEW

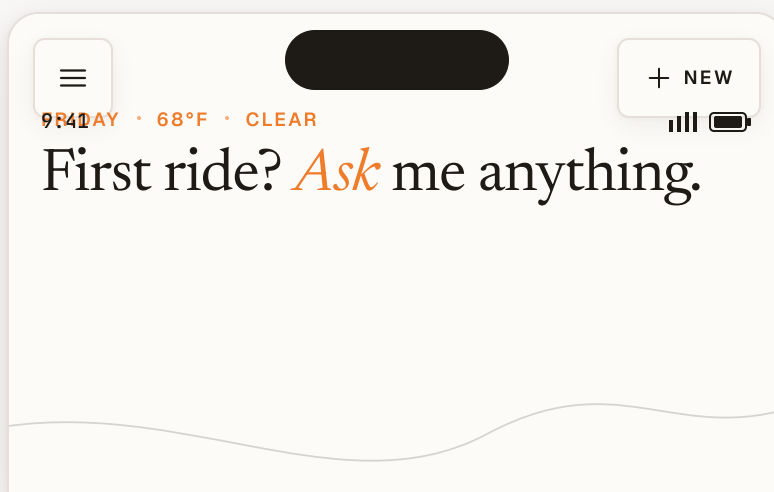

Where are we *starting* from?

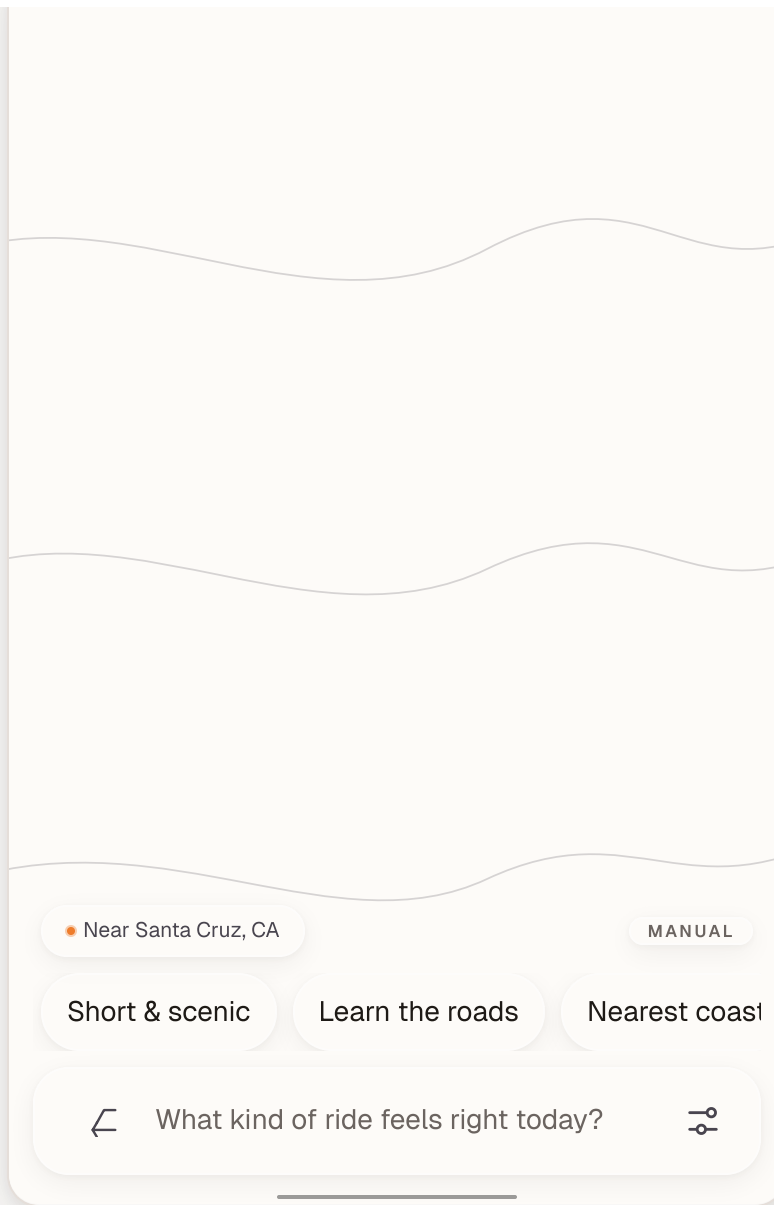

— V02 • First Ride

No saved favorites *yet*

Empty favorites collection — no pins on the map. Suggestion chips swap to onboarding-grade primers. Greeting headline acknowledges the fresh state.

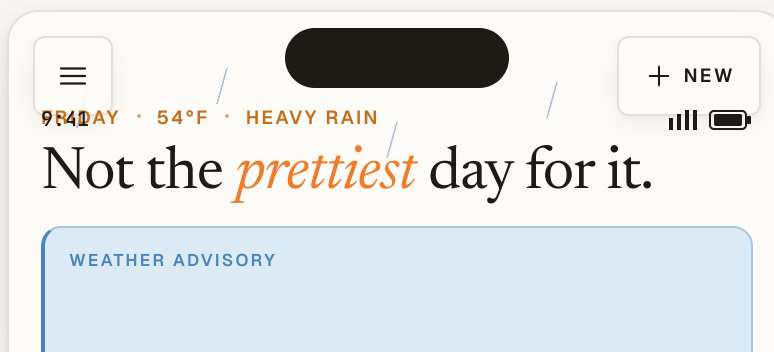

— V03 • Weather Advisory

Navigator sets *expectations*

WeatherSummary.severity $\geq$ advisory. Greeting takes an opinion stance; a rain-tinted advisory card appears. Suggestion chips shift to short/dry primers. Meta row accent changes to warning.

*I can still plan something, but shorter loops near home
will beat anything with a pass today.*
